

HOCKWAY™
CORROSION CONTROL SYSTEMS

Your **lasting** partner in corrosion control

Hockway. Our **reputation** for longevity makes us the first people to call

HOCKWAY[™]
CORROSION CONTROL SYSTEMS

At Hockway, we are building on more than 30 years unrivalled understanding of how effective corrosion control can make structures last longer in almost every environment. More than anyone else, we know how high quality corrosion prevention systems, effectively monitored and maintained, are critical to asset integrity and can fit seamlessly into the way Operators and EPC Contractors work.

From the start, with surveys, conceptual design and bespoke material manufacturing, to on-going maintenance and support, we have the experience to make us the first people to call for all of your onshore and offshore anti corrosion requirements.

Whether you are in oil and gas, marine or civil engineering, we supply the whole corrosion control package to ensure asset integrity through effective engineering and high quality corrosion prevention products that are supported throughout their life.

Hockway's depth of engineering capability, breadth of product range and progressive approach to corrosion management allow us to provide corrosion control systems for all your requirements. We are:

Corrosion Engineers

Our experienced teams deliver global engineering and project execution services, from conceptual design through to operational support.

Corrosion control system manufacturers

We design and build state-of-the-art equipment to meet the specific and exact demands of your applications.

Corrosion control material suppliers

Our comprehensive range of corrosion control system materials and key alliances with manufacturers mean we deliver an efficient and responsive material supply service.

"Hockway's vast experience with complex EPC projects helped me anticipate any issues. And as CP system designers, they were responsive in tailoring CP equipment to meet our specific project requirements."

End-to-end **advantages** and powerful and effective support

For EPC Contractors

Starting ahead

Hockway's advantages for EPC Contractors begin before the tender process. Our pro-active and forward thinking Design Consultancy can assist you in site surveys, basic systems designs and scope documents for project tendering and execution. Our engineers and surveyors can then stay with you until the verification and commissioning of the project.

A better delivery

Hockway's corrosion control system packages fit precisely within your EPC project. Along with applying a strong project management ethos to our work, we work closely with you to ensure our part of your project fits seamlessly into your plans. We are also approved by most of the major operators, allowing us to validate your control system as we put it together.

A fast track advantage

Our in-house high quality manufacturing capability and strong supplier relationships allow us to reduce critical delivery times for equipment and material, while ensuring all orders are built to the most exacting and precise standards.

For Operators

Global expertise

Our experienced engineers and technicians travel worldwide to determine your corrosion control needs and develop and implement effective corrosion control programs.

Lasting corrosion control

Using the highest quality materials, site support and operator training our corrosion control packages will ensure asset integrity for life.

Material

We supply the full spectrum of corrosion control materials for both onshore and offshore applications. Our in-house built

equipment is renowned for its quality and our offshore retrofit products are helping Operators globally to extend the life of aging assets. You can find a full list of our equipment at our website www.hockway.com

Site support, field and monitoring services

These form an integrated, powerful and cost effective tool for ongoing operational support. We conduct all types of necessary surveys, provide maintenance programmes and supervise installation of all cathodic protection equipment. We also have the capability to set up onsite and remote monitoring applications.

Training

Our bespoke programmes suit your specific purpose and equipment needs. They include classroom and practical hands-on training on survey equipment and techniques, corrosion control system operation and maintenance, and remote monitoring and control.

“As manufacturers, they were quick to deliver tailored equipment to meet our needs.”

Onshore, offshore, inshore. **Wherever** corrosion control systems can work, so can we

Hockway's wide-ranging experience has seen us developing a comprehensive set of corrosion control systems encompassing cathodic protection, monitoring, coatings and wraps for the following applications:

- › Onshore facilities – pipelines, tanks, wellcasing, process plant piping and equipment
- › Offshore facilities – jackets, pipelines, risers
- › Jetties, terminals and SBMs
- › Harbours, piers and quay walls
- › Concrete reinforcement

Technical capabilities include:

- › Consulting
- › Inspection
- › CP Surveys
- › Material, equipment and system selection and supply
- › Corrosion management strategies and plans
- › Marine coating and wraps
- › Structural and composite repairs

A better way to work

We all know that having the best possible working relationships with Operators and EPC Contractors, suppliers and everyone else in our chain of business is vital for efficient project execution. In our thirty years, we have been proud and privileged to strike up business relationships that, like our work, last the test of time.

- › Sakhalin Pipeline
- › Kashagan processing facilities
- › Abu Dhabi OGDIII project
- › Algerian In Salah and Inaminas gas projects
- › Veba Oil Libya, Amal pipelines
- › Shell Anasuria FPSO

“Hockway not only defined our corrosion control needs but also extended our structure life range with efficient offshore protection.”

Our **facilities** and integrated services

Our Redhill facility, which incorporates integrated engineering and manufacturing capabilities, is at the centre of a network of offices throughout the world.

Within these facilities we engineer, manufacture and stock a full range of custom designed corrosion control system equipment, including:

- › All types of CP power supplies including fully certified equipment for use in Zone 2 Classified Hazardous Areas)
- › Remote monitoring and control equipment
- › Full spectrum of impressed current and sacrificial anodes
- › Power distribution equipment including junction boxes and cable
- › CP instrumentation including reference cells meters, test facilities etc.
- › Offshore CP and monitoring products including both sacrificial and impressed current retrofit systems
- › Marine coatings and structural wraps

In addition to a global network of manufacturing and stocking facilities, Hockway has one of the most experienced engineering teams in the industry and can call on experts in virtually every field of corrosion management both onshore and offshore.

- › London
- › Aberdeen
- › Houston
- › Abu Dhabi
- › Khobar
- › Doha
- › Kuwait
- › Tripoli
- › Warri

Hockway is also the official United Kingdom, Europe and Middle East Distributor for:

- › M.C. Miller Co. Inc.
- › Bass Engineering
- › Kirk Engineering Co. Inc.
- › Cott Manufacturing Co.
- › Nilsson Electrical Laboratories Inc.
- › Borin Manufacturing
- › 3M Ltd
- › Dehn & Sohne
